

MegaPath Business Continuity SSL

When disaster strikes, MegaPath Business Continuity SSL service ensures instant, scalable, remote access to your network.

Provide remote users with network “insurance” against business disruptions.

If your employees and partners need to access your corporate network to conduct business, how will you ensure business continuity during times of disaster and other business disruptions? Protect your business—and your bottom line—with the MegaPath Business Continuity SSL service.

You could experience a catastrophic disaster, such as a hurricane, security alert or health pandemic. Or, an event as simple as a power outage, winter snow storm or unusual seasonal business volume. No matter what the disruptive event may be, MegaPath keeps your remote users connected to the network and your business running smoothly.

Access from anywhere, when you need it

Why MegaPath? It’s reliable, scalable and easy. Utilizing leading SSL VPN technology, MegaPath allows remote users to access network applications from any device, anywhere—without having to pre-install a client, software or perform other disaster planning activities.

You save money. Most business continuity plans include purchase of additional equipment and infrastructure, whether it is used or not. This requires capital expenditure upfront and can significantly impact your IT budget. In contrast, MegaPath delivers the added capacity without the initial capital expenditure.

You get remote access—disaster or no disaster. MegaPath’s professional engineers deploy equipment and set up the service so that your users can access the corporate network regularly, even when there isn’t a disaster. When there is a disastrous event, the equipment deployed has enough capacity to handle instantaneous peak usage.

Plus, the solution is the same as the remote access solution. For those users who use the remote access solution on a daily basis, no additional training is required.

MegaPath Business Continuity SSL

"Business continuity and remote access go hand in hand, as typical business disruptions result in employees and other users staying away from the office and the local area network (LAN)."

— Tim Clark, Fact Point Group

More Flexibility

By providing continuous, uninterrupted network access for your remote users, you gain the confidence and flexibility to build and expand your remote office workforce. As your remote workforce grows, your organization grows and prospers.

More Scalable

Whenever usage peaks, MegaPath responds with sufficient capacity to keep your business running smoothly. No set up time or activities are required. Your network access instantly and automatically scales to match your business continuity demand.

More Accessible

With MegaPath, your employees and other network users can gain access to any application from any device, anywhere in the world. Remote users take advantage of full-featured connectivity, without having to install a client.

About MegaPath

Founded in 1996, MegaPath is relied on by over 22,000 business customers at over 70,000 business locations. MegaPath offers a wide range of nationwide broadband connectivity and managed services for small businesses and larger, all the way up to Fortune 500 enterprises.
