

Shell CoolBand Network

The Shell CoolBand network, powered by MegaPath, enables you to process your credit/debit cards and connect your store applications—all through one high-speed, PCI-compliant network.

Cost Savings

Reduce monthly costs for multiple phone and satellite connections by streamlining your store applications (i.e. credit/debit/fleet cards, ATM, video surveillance) on a single broadband connection.

Superior Technology

If you're currently using an alternative satellite solution, switching to MegaPath's solution – DSL or satellite – provides you with far more functionality and performance for less than you're paying now for satellite alone.

Fully Managed Solution

As your one trusted partner, MegaPath takes care of everything from network design and implementation, to ongoing monitoring and support.

- Professional Installation – Our skilled technicians install all the necessary equipment
- Proactive Monitoring & Support – Our engineers proactively monitor your network 24x7
- Managed Router – We repair or replace your router if there's ever an issue
- 4-Hour Onsite Maintenance – No other broadband provider is more responsive
- Industry-leading SLAs – Guaranteed install intervals, uptime and performance

With CoolBand, you get:

- High-speed Internet Access – Check email, access web-based applications, etc.
- Credit Card Transactions – Secure transport to Shell for processing
- Automated Dial Backup – Keep processing credit cards even if there's interruption in the broadband service
- Managed Security – Firewall, Intrusion Prevention and Anti-virus for PCI Compliance
- Site-to-Site MPLS VPN – For owners with multiple locations, connect all your stores on a secure private network
- Virtual IP Addresses – Connect your tank monitoring service and check your video surveillance system remotely

Shell CoolBand Network

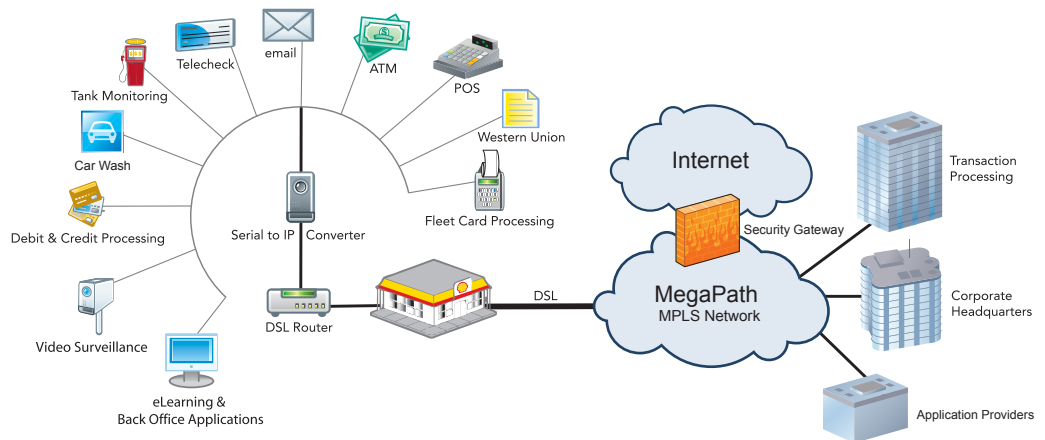

"MegaPath's line of fully managed IP services allows Shell-branded retailers to consider options for increasing the value they provide customers, while reducing overhead costs and enabling tools to manage their operations."

— Paul Stanifer, General Manager
Operations Support, SHELL US

Not all Satellite is the Same

MegaPath's CoolBand broadband satellite (VSAT) solution offers the following benefits over other VSAT offerings:

- Supports all of your store applications, not just credit card processing
- Utilizes KA Band technology to provide super-fast upload/download speeds
- Includes enterprise-class managed security
- Provides 24x7 proactive monitoring and automated dial back-up

*CoolBand allows you to combine all your in-store applications over a single broadband connection.**

Connect All Your Stores and Remote Users

With CoolBand, you can connect all of your stores – even ones that are not Shell branded – using MegaPath's Site-to-Site MPLS VPN service. This enables you to easily and securely access client-server applications and files that are located at headquarters, and distributed applications, like POS systems, PCs and video surveillance DVRs, that are located at your stores. You can even check your video surveillance system remotely and provide access to your Tank Monitoring system using Virtual IP Addresses.

Streamline Your Applications

CoolBand lets you run your Shell credit/debit/fleet card transactions over the same broadband connection as your ATM, Check Cashing, Money Order, Tank Monitoring and other store systems and Internet applications. So, you no longer have to pay for broadband Internet access and a satellite connection, and you can disconnect the phone lines that these other store systems use – saving you even more money!

Ensure Your Business is PCI Compliant

CoolBand was designed to help you meet the stringent security requirements of PCI compliance. Unlike regular broadband, it is completely private – your payment card data never touches the public Internet. And, it includes Managed Firewall, Intrusion Prevention and Anti-virus service to protect your network and systems when you access the public Internet to send email and surf the web.
