

MegaPath Global Remote Access Service

MegaPath's Global Remote Access Services provide mobile workers with quick, reliable and secure access to the Internet—worldwide

The Connected Worker | Mobile Workers and Mobile Offices

Global Remote Access Services

For today's mobile workers, staying connected is critical to staying productive when out of the office. But connecting and supporting hundreds of highly mobile workers can be an expensive, daunting challenge for most enterprise IT departments. And finding a trusted service provider that can cost-effectively connect mobile workers using enterprise features, such as broadband and Wi-Fi access, is far from easy.

Connect Mobile Workers with Ease

MegaPath's Global Remote Access Services provide mobile workers with quick, reliable and secure access to the Internet in 150 countries from over 95,000 broadband locations and 28,000 dial numbers around the globe. We offer the world's largest virtual network of dial-up lines, Wired Hotel and WiFi "hotspot" locations.

In addition, the Global Remote Access Service can be integrated with MegaPath's Managed SSL VPN solutions to securely connect users to corporate resources. MegaPath provides easy-to-use software that enables mobile workers to quickly look-up local connections and log on to the Internet using their existing username and password. We provide 24 x 7 technical support to resolve mobile worker connectivity problems and our online reporting suite lets you view and download daily usage data.

Increase Productivity, Decrease Costs

MegaPath's Global Remote Access Service lets you accurately identify and track your connectivity costs instead of posting fees for broadband access in hotels, airports, and hotspots to Travel and Expense accounts. Expensive long-distance and toll charges are virtually eliminated because users dial into a local phone number on the public Internet for most of their sessions using a user-friendly dialer that quickly locates a local phone number wherever they may be. In addition, this service provides redundant Points of Presence (POPs) on separate Internet backbones in most major markets – meaning greater access redundancy, less reliance on any single provider's network, and superior mobile worker productivity.

Global Remote Access Services include:

- Worldwide, redundant access
- Easy-to-use client software
- Thousands of worldwide dial-up, Wi-Fi and Ethernet broadband locations in over 150 countries
- 24 x 7 technical support for mobile worker connectivity
- Centralized Web management
- Detailed usage reporting

Find out today how much you can save.

MegaPath Global Remote Access Service

Global Dial Coverage – Includes over 28,000 dial-up, GSM and PHS network Points of Presence (POPs). It uses settlement and authentication technologies to integrate global and regional service providers throughout the world to create a seamless worldwide remote access network.

Global High-Speed Broadband Coverage – Includes over 95,000 wired and Wi-Fi wireless broadband access points at Internet "hotspots" around the world in locations such as airports, hotels, coffee shops, bookstores, and conference centers.

Redundant Access Points – Integrates global and regional service providers to provide redundant network access points in major metropolitan business centers.

Secure Connectivity – Protects authentication credentials using 128-bit SSL encryption. It can be fully integrated with MegaPath or customer-supplied VPN and personal firewall services.

Easy-to-use Software Client – Provides mobile workers with a simple, intuitive software client that is easy to install, use and manage which provides users with complete lists of access points by location.

Simple Deployment – Point-and-click installation ensures mobile workers can quickly and easily install the software client on laptops and PCs with little or no technical assistance.

Web-based Usage Reporting – Allows companies to easily track access usage by employee and/or employee user groups to enable internal billing charge backs. Detailed and summary usage information is provided by user, country, region, and location. "Top Calls" and "Top Users" reports help companies track and appropriately train their most active mobile workers. Ad-hoc reporting tools allow companies to "slice and dice" usage information as needed.

24 x 7 Technical Support – 24 x 7 technical support is provided to all Global Remote Access Service customers and their mobile workers. On-going support includes automatic software client upgrades, RoamServer upgrades, automatic phonebook updates, and automatic error collection to improve technical support services.

About MegaPath

Founded in 1996, MegaPath is relied on by over 22,000 business customers at over 70,000 business locations. MegaPath offers a wide range of nationwide broadband connectivity and managed services for small businesses and larger, all the way up to Fortune 500 enterprises.
