

## MegaPath Site-to-Site IPsec VPN

Safely share files, applications, and resources among offices

### MegaPath Site-to-Site IPsec VPN

Designed for companies with fewer than 5 locations, the MegaPath Site-to-Site IPsec VPN quickly and easily connects all your sites on the same network so you can safely share files, applications and resources among offices. This service uses Internet Protocol Security (IPsec), the most widely deployed data encapsulation and encryption technology, to transmit your data securely across the Internet without it being read or tampered with during its journey. Now, your employees can securely access client-server applications, file servers, the company intranet and other resources hosted at headquarters, and your IT department can backup files or troubleshoot computers at any of your locations without leaving their office.

### Simple, Cost-Effective and Easy

Connecting sites using MegaPath's Site-to-Site IPsec VPN is simple and straightforward and requires no in-house expertise or additional equipment, since it uses the same router as your MegaPath broadband access. You can choose from MegaPath's wide selection of broadband access technologies, depending on what's right for each individual location, to minimize costs while ensuring each site gets the bandwidth it needs. And deploying the network is easy. We take care of everything, from configuring and installing the equipment to providing ongoing technical support, saving your valuable IT staff time and resources. If there are any issues at any time, our skilled technicians are available 24x7x365.

### Get More with MegaPath

As your business grows, we can convert your network to a Site-to-Site MPLS VPN without disconnecting circuits or replacing your equipment – we simply re-configure your routers. This enterprise-class VPN service can be seamlessly integrated with MegaPath's managed security and remote access solutions for extended functionality and flexibility. Together, these services reduce the risk of blended threats and are fully managed so you don't need to incur the cost, hassle and scalability limitations of a do-it-yourself approach.

### MegaPath Site-to-Site IPsec VPN

- Connects all your sites on one secure network
- Designed for 5 locations or fewer
- Enables file and application sharing among offices
- Lets IT department backup and troubleshoot all equipment from one location

# MegaPath Site-to-Site IPsec VPN

## Security

MegaPath's Site-to-Site IPsec VPN solution delivers the highest level of protection using DES and 3DES encryption, so you can be confident your data is secure.

## Selection

MegaPath offers the widest selection of access technologies. Every site gets the right bandwidth at the right price, and you don't have to manage several different access vendors. MegaPath can even extend the reach of your VPN to partners or remote workers using their existing Internet access.

## Service

MegaPath Site-to-Site IPsec VPN is a turnkey service—we take care of everything from network design and implementation to 24x7 technical support. Our industry-leading Service Level Agreements (SLAs) ensure the highest performance and reliability, addressing installation intervals, service availability, outage notification, mean time to repair and chronic outages.

## About MegaPath

Founded in 1996, MegaPath is relied on by over 22,000 business customers at over 70,000 business locations. MegaPath offers a wide range of nationwide broadband connectivity and managed services for small businesses and larger, all the way up to Fortune 500 enterprises.
