

MegaPath Enterprise Shared Voice

Share Across Locations

Share Call Capacity & Minutes Across Locations

Distributed enterprises are often saddled with an array of voice technologies scattered across multiple sites. Costs for idle lines and wasted calling minutes compound across multi-site operations. MegaPath Enterprise Shared Voice greatly reduces telecom costs by sharing voice resources, including concurrent call capacity and minutes plans, across all of your business locations regardless of the voice handoff technology in use.

Flexibility

MegaPath Enterprise Shared Voice is a truly hybrid voice solution. Need SIP Trunking for your headquarters, PRI lines for branch offices, and Hosted or Analog Lines for remote workers and satellite offices? MegaPath Enterprise Shared Voice supports this type of mixed environment—affordably, while simplifying management of your voice solution and delivering enterprise-ready calling and collaboration features.

Cost Savings

Meet calling requirements, affordably. Because MegaPath Enterprise Shared Voice supports any handoff type including SIP Trunking, PRI, Analog lines, and Hosted Voice, you can use your choice of equipment—including equipment you already own or lease—and avoid costly investments in equipment purchases or upgrades. With Enterprise Shared Voice, you avoid wasting unused toll-free and long-distance minutes by sharing calling plans across locations. MegaPath offers a variety of shared-minute calling plans to meet your organization's calling needs. And on-net calling between your locations is always free.

Advanced Calling Features

MegaPath Enterprise Shared Voice lets you give every user access to next-generation communications and collaboration features on day one, while offering the flexibility to gradually migrate away from legacy voice technologies as budget and resources permit.

Give every user enterprise-grade calling features—like Audio Conferencing, Visual Voicemail, and Find Me/Follow Me—to help boost productivity, promote mobility, and improve communication with customers and colleagues.

Experience Voice quality. When our voice services are delivered over a MegaPath-provided circuit, we can ensure that QoS standards are maintained from end to end. Plus, our HD Voice ensures crystal-clear call quality.

Benefits

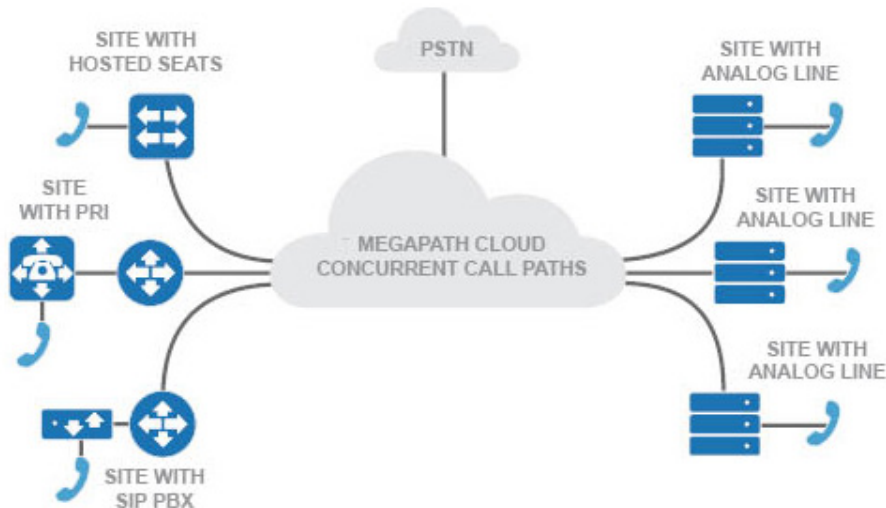

- ▶ Reduce costs by sharing call capacity, calling plans and free on-net calling
- ▶ Support a mix of technology handoff types enterprise-wide
- ▶ Allocate minimum and maximum call paths to defined groups or locations
- ▶ Support growth and modernize your voice services
- ▶ Extend the useful life of your existing equipment and avoid CapEx

Distribute Calling Resources Dynamically

Lower communications costs by purchasing, pooling, and dynamically sharing only the number of call paths you need across your organization. All your call paths and minutes plans can be available to all users, regardless of location or voice technology type.

Efficiently manage and allocate minimum and maximum concurrent call paths to defined groups or locations. The ability to designate independent capacity sharing within groups helps you meet the business needs of teams or a subset of locations. For example, an inbound sales team can have its own designated minimum capacity to ensure that customer calls always get through. Need to reallocate capacity to accommodate campaign responses, a holiday or other business event? Simply log in to the portal and reallocate call paths as needed.

Simplify IT Administration & Support Growth

MegaPath Enterprise Shared Voice works with your existing voice systems, connecting them through the cloud, extending your investment in existing voice technologies so you avoid expensive equipment purchases and upgrades. When you're ready, you can gradually migrate employees onto next-generation communications technologies according to your needs and budget. MegaPath Enterprise Shared Voice also lets you dynamically allocate shared resources among locations or groups of locations through an easy-to-use portal.

The MegaPath Advantage

Complete Service Portfolio

We offer a full range of business voice, data, security, and Hosted IT services.

Superior Voice Quality

Our voice network achieves 99.999% availability, providing customers with the highest level of reliability in the industry.
